

Rethink Curtain Wall Think FiberWall™

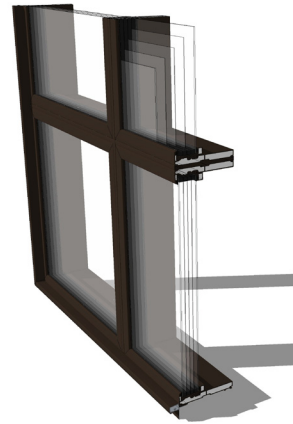

FiberWall™ is a window and door system born out of the desire to create dramatic walls of glass with slimmer sight lines and the ultimate in energy performance.

- Frame depths include the standard 3 ¼" as well as more robust 4 ½" and 6 ½" frames

Current projects have ranged from strip windows 80' wide, to upward stretching configurations of 20' tall with added steel reinforcement.

- Sight lines remain as slim as the standard fiberglass series
- Closed-back frames for additional strength and protection from moisture. Also allows for easier joins with building envelope details
- Interior fiberglass glazing stop with a rubber spline
- Accommodates ultra high performance glazing units, including Quint Pane Heat Mirror and 6 mm Triple Pane

Maximize Your View Without Compromising Utility

FiberWall swinging doors seamlessly connect to the window frames with minimal sight lines and increased rigidity.

- Insulated fiberglass door panel and fiberglass frames
- German-engineered multi-point locking hardware for increased security
- Lo-profile inswing sill available in a variety of depths
- Double weatherstripping
- Dual or triple pane glazing
